

SECTION 2 - LEARNING ABOUT THE STRETCHER

2.1 Model 65 and Model 65-Pin Scoop™ Stretcher Description

The **Model 65 Scoop™ Stretcher** (stretcher) is an emergency patient-handling device. It is designed to aid in moving a patient when space is limited or when the patient needs to be moved with little change of body position.

The stretcher is for professional use by a minimum of two trained operators.

The stretcher frame is constructed in two halves which uncouple, slide under the patient, then recouple for lifting the patient. The stretcher may also be used in a "V" shape when uncoupled at only the foot end.

Other features include a telescoping foot section with three locking positions for length adjustment, three handholds on each side of the main frame, and concealed hinges which allow the stretcher to be folded for storage.

The Model 65 stretcher is equipped with a set of three patient restraints.

The **Model 65-Pin Scoop™ Stretcher** includes all the features of the Model 65, plus stainless steel speed clip pins for use with patient restraints equipped with speed clips.

The Model 65-Pin stretcher is equipped with a set of three two-piece restraints with speed clips.

2.2 General Specifications for Model 65 and Model 65-Pin

Length
 Maximum 200 cm
 Minimum 165 cm
 Folded 119 cm

Width
 Open 43 cm
 Closed 43 cm

Depth
 Open 8 cm
 Folded 10 cm

Weight 7 kg

Maximum Load Limit 159 kg.

The specifications are rounded to the nearest whole number. For detailed specifications, contact your Ferno distributor (page 17). Ferno reserves the right to change specifications without notice.

Maximum Load Limit

Inspect the stretcher if the load limit has been exceeded.

 WARNING
<p>Improper use of the stretcher can cause injury. Use the stretcher only for the purpose described in this manual.</p>
